In Appreciation

We are indebted to the students, teachers, Minnesota Student Survey coordinators and superintendents across the state that agreed to participate in and willingly supported the student survey when it was administered in the spring of 2004. These data are made available as a result of their interest and time and we are grateful for their efforts. A special note to students and parents—we hope these data can be used to help further prevention activities in your schools and communities and thank you for supporting efforts to ensure healthy environments for all youth. We are also indebted to the many state agency staff, especially the analysts with the Center for Health Statistics at the Minnesota Department of Health, for their tireless work on making these data available.

2004 MINNESOTA STUDENT SURVEY

Survey Participation

The 2004 Minnesota Student Survey was administered in the spring of 2004 to public school students in Grades 6, 9, and 12. All public school districts in Minnesota were invited to participate. Of the 342 public operating districts, 301 agreed to participate (88% of public operating school districts).

Student participation was voluntary. Surveys were anonymous. Sixth, ninth and twelfth graders were invited to participate in the survey. Across the state, approximately 76% of public school sixth graders, 75% of public school ninth graders, and 55% of public school twelfth graders participated in the 2004 Minnesota Student Survey.

The majority of schools in the state used an opt-out consent procedure for the survey (meaning that parents could decline to have their children take the survey). A few school districts used an active consent process (meaning parents returned a signed permission slip to school before their children took the survey). Please note that the type of consent process used in your school district may have influenced the number and type of students who participated. This and other variables affected who did and did not participate in your school district this year. We encourage you to **compare your spring enrollment numbers to your student survey participation numbers** (*which are on page 1 of the data tables*) in order to get an understanding of the percentage of your students who participated in this survey. Also note that not every student who participated in the survey answered every question.

Items on the Tables

The accompanying set of tables includes the responses for all survey items. Items are ordered within the tables according to meaningful domains; the order items appear on the tables is not necessarily the order they appeared in the survey. A Table of Contents is provided on page iii. The Grade 6 survey version was shorter than the Grade 9-12 version and did not include items appropriate only for older students. Items found on one version of the survey but not the other are identified on the tables.

If you see blank cells in certain parts of your tables, we are unable to report a prevalence of behavior because doing so would compromise the anonymity of the young people who responded. If you see a cell with a "greater than" a certain percentage, the prevalence of the behavior was high enough that displaying the exact percentage would again compromise anonymity. In some cases, where the student population was too small, we combined responses from boys and girls.

Year-to-Year Comparisons

The 2004 survey questions were not changed in any way from the 2001 survey, so comparisons between data from the 2004 and 2001 surveys should be relatively easy. Please note that although these surveys are given repeatedly over time, your student population may change between administrations of the survey.

Validity of Responses

A small percentage of surveys (approximately 3%) was eliminated from analyses because gender was missing, responses were highly inconsistent, or there was a pattern of likely exaggeration.
